# HTL STATIC ELECTRIC HOOFTTRIMMING CRUSH

*The HTL Static Electric Crush is a very popular option for any size herd where the operator wants an easier way of handling cattle for hooftrimming without all the backache.*

Built to an exceptionally high standard and featuring sturdy steel frame construction, a self-locking front head gate, rear rump bar and five electric hoists, this crush combines safety with ease-of-use by having two hinged gates each side to help funnel the cows in. There is also a rear rump chain, which means it can easily be used for other routine jobs, such as AI and vet inspections.

Your **one-stop-shop** for hooftrimming services, crushes, accessories and supplies
